                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 15, Application US/09575506
Patent No. 506735
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Methyltransferase Oligonuclectides Complementary to DNA TITLE OF INVENTION: Methyltransferase Sequences
TITLE OF INVENTION: Methyltransferase Sequences
TITLE OF INVENTION: Methyltransferase Sequences
CURRENT APPLICATION NUMBER: US/09/575,506
CURRENT FILING DATE: 2000-05-22
PRIOR APPLICATION NUMBER: US 09/018,034
PRIOR FILING DATE: 1998-02-03
NUMBER OF SEQ ID NOS: 21
SOFFWARE: Patentin version 3.0
SEQ ID NO 15
LENGTH: 20
                           GENERAL INCORMATION:
APPLICANT: MacLedd, A. Robert
APPLICANT: MacLedd, A. Robert
TITLE OF INVENTION: Optimized Antieense Oligonucleotides Complementary to DNA
TITLE OF INVENTION: Methyltransferase Sequences
TITLE OF INVENTION: Methyltransferase Sequences

Sequence 117, Application US/09548797B

Sequence 117, Application US/09548797B

Patent No. 6633165

GENERAL INFORMATION:

TITLE OF INVENTION: NOVEL HUMAN GENE RELATING TO RESPIRATORY DISEASES AND

TITLE OF INVENTION: OBESITY

TITLE OF INVENTION: 1096-4039

CURRENT APPLICATION NUMBER: US/09/548,797B

CURRENT FILING DATE: 2002-11-26

PRIOR FILING DATE: 1999-04-13

NUMBER OF SEQ ID NOS: 170

SOFTWARE: PATENT VELICY OF SEQ ID NOS: 170

SEQ ID NO 117

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Feath No. 6037122
GENERAL INFORMATION:
APPLICANT: MABILAT Claude
APPLICANT: RUIMY Raymond
TITLE OF INVENTION: NUCLEOTIDE FRAGMENT OF THE 16S RIBOSOMAL RNA OF CORYNBEACTES
CORRESPONDENCE ADDRESS:
ADDRESSEE: Oliff & Berridge
STREET: 700 SOUTH Washington Street, Suite 300
CITY: Alexandria
CONFUTER FRADABLE FORM:
MEDIUM TYPE: Virginia
COMPUTER FRADABLE FORM:
MEDIUM TYPE: PLOSS/MS-DOS
SOFTWARE: TAB FO COMPATION BASE:
COMPUTER READABLE STATE
FLING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: MABSER PATENTIN REPRESSER: US/08/641,231A
FILING DATE: 30.024

US-08-838-715B-29/c
; Sequence 29, Application US/08838715B
; Patent No. 6153555
; GENERAL INFORMATION:
APPLICANT: Draper, Chapman, Kisner, Anderson
; TITLE OF INVENTION: Composition and Method for Treatment
; TITLE OF INVENTION: 90 CMV Infection
                                                                             GENERAL INTOKATALON:
ACRICANT: Susan Grimm
APPLICANT: Dan T. Stinchcomb
APPLICANT: Dan T. Stinchcomb
APPLICANT: Gean SUllivan
APPLICANT: Gean Sullivan
APPLICANT: Sean Sullivan
APPLICANT: Kenneth G. Draper

i Sequence 2128, Application US/09371772B

Sequence 2128, Application US/09371772B

Patent No. 6566127
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Baccobed, Jame
APPLICANT: Stinchomb, Dan
APPLICANT: Stinchomb, Dan
APPLICANT: Stinchomb, Dan
APPLICANT: Becobed, Jaime
ITILE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
ITILE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
ITILE OF INVENTION NUMBER: US/09/371,772B

CURRENT PRING DATE: 1999-108-10

PRIOR FILING DATE: 1995-10-26
PRIOR PILING DATE: 1996-01-08

NUMBER OF SEQ ID NOS: 14425
SOFTWARE: PatentIn version 3.0

SEQ ID NO 2128
LENGTH: 17

TYPE: RNA
                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 541, Application US/09371772B

US-09-371-772B-5011/C

Sequence 5011, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Stinchoob, Dan

APPLICANT: Scobedo, Jaime

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF ILING DATE: 1999-08-10

CURRENT FILING DATE: 1999-08-10

PRIOR FILING DATE: 1999-08-10

PRIOR FILING DATE: 1996-01-08

NUMBER OF SEQ ID NOS: 14225

SOFTWARE: Patentin Version 3.0

LENGTH: 17

Sequence 476, Application US/09476387

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Beigelman, Leo
APPLICANT: Rapeisky, Anber
APPLICANT: Rapeisky, Anber
APPLICANT: Admin Conformation into Oligonucleot
APPLICANT: Abender, Dave
APPLICANT: Amen, Shawn
TITLE OF INVENTION: Nucleotide Triphosphate and their Incorporation into Oligonucleot
FILE OF INVENTION: Nucleotide Triphosphate and their Incorporation into Oligonucleot
CURRENT APPLICATION NUMBER: US/09/476,387

CURRENT APPLICATION NUMBER: US/09/474,432

PRIOR APPLICATION NUMBER: 09/474,432

PRIOR APPLICATION NUMBER: 09/474,432

PRIOR FILING DATE: 1999-10-29

PRIOR APPLICATION NUMBER: 09/486,675

PRIOR FILING DATE: 1999-10-29

PRIOR APPLICATION NUMBER: 09/06,675

PRIOR APPLICATION NUMBER: 09/04-29

PRIOR APPLICATION NUMBER: 09/064,866

Sequence 574, Application US/09827998

Patent No. 6656700

GENERAL INFORMATION:

APPLICANT: GW. Yizhong

APPLICANT: GW. Yizhong

APPLICANT: GW. Yizhong

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

FILE REFERENCE:

CURRENT APPLICATION NUMBER: US/09/827,998

CURRENT APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/207,456

PRIOR FILING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE: Aeomica Sequence Listing Engine

SEQ ID NO 574

LENGTH: 17

| Sequence 2, Application US/09875318A
| Sequence 2, Application US/09875318A
| Patent No. 6677501
| GENERAL INFORMATION:
| APPLICANT: Gabel, Christopher A.
| APPLICANT: Gabel, Christopher A.
| TITLE OF INVENTION: P2x7 RECEPTOR-DEFICIENT NON-HUMAN ANIMALS AND USES THEREOF;
| FILE REFERENCE: 71369-186 (PFT-010US)
| CURRENT APPLICATION NUMBER: US/09/875,318A
| CURRENT PILING DATE: 2000-06-06
| PRIOR PILING DATE: 2000-06-06
| PRIOR FILING DATE: 2000-06-06
| SOFTWARE: Patentin version 3.1
| SEQ ID NO 2
| LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-00-866-108A-660

Sequence 660, Application US/09866108A

Patent No. 666188

APPLICANT: 10, Yorngang

APPLICANT: 11, Yorngang

APPLICANT: PENN, Sharron G.

APPLICANT: HANZEL, David K.

APPLICANT: HANZEL, David K.

APPLICANT: HANZEL, David K.

APPLICANT: SHANN, David K.

APPLICANT: SHANNO, Mark

APPLICANT: WOSIN-LIKE GENE EXPRESSED IN HUMAN HEART AND MUSCLE

FILE REPERBNCE: AECMICA-7

CURRENT APPLICATION NUMBER: US/09/866,108A

CURRENT PILING DATE: 2001-05-25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 99, Application US/08363585

| Sequence 99, Application US/08363585
| Patent No. 5683872
| GENERAL INFORMATION:
| APPLICANT: Trucco, Massamo |
| TITLE OF INVENTION: Polymers of Oligonucleotide Probes |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: Dot Blots |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As The Bound Ligands For Use In Reverse |
| TITLE OF INVENTION: As THE BOUND FOR PROPERTY |
| STREET: Office of Intellectual Property |
| STREET: Office of Intellectual Property |
| COUNTY: USA |
| TITLE OF INVENTION: AS THE BOUND FOR PRABLE FORM: |
| MEDIUM TYPE: 5-1/4" low density diskette |
| COMPUTER: IBM PC or compatibles |
| OPERATING SYSTEM: MS-DOS |
| OPERATING SYSTEM: 
COMPUTER READABLE FORM:
MEDIUM TYPE: 5-14" low density diskette
COMPUTER: 1BM PC or compatibles
OPERATING SYSTEM: MS-DOS
SOFTWARE: ASCII
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/363,585
FILING DATE: 1-0CT-1991
ATTORNEY/ABENT INFORMATION:
NAME: Frederick H. Colen; Mary-Elizabeth Buckles
FILING DATE: 31-0CT-1991
ATTORNEY/ABENT INFORMATION:
NAME: Frederick H. Colen; Mary-Elizabeth Buckles
RESTENDE/DOCKET NUMBER: 28,0G1; 31,907
RESERONG/DOCKET NUMBER: 92-232
TELEFAX: 412/288-4164
TELEFAX: 27701
INFORMATION FOR SEQ ID NO: 75:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 nucleotides
TELER: 21001
STRANDENNESS: single
TURGE TYPE: qenomic DNA
PUBLICATION INFORMATION:
AUTHORS: Gasaruki, T.
TITLE: Eleventh International Histocompatibility
TITLE: Technique
JOURNAL: HLA 1991
VOLUME: .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 32, Application US/09161015A
Patent No. 5965370
GENERAL THORNATION:
APPLICANT: Lex M. COWSET
TITLE OF INVENTION: ANTISENSE MODULATION OF RhoG EXPRESSION
FILE REPERENCE: RTS-0015
CURRENT PAPLICATION NUMBER: US/09/161,015A
CURRENT FILING DATE: 1998-09-25

APPLICANT: BERGERON, Michel G.
APPLICANT: PICARD, Francois J.
APPLICANT: OUELETTE, Marc
APPLICANT: OUELETTE, Marc
APPLICANT: ROY, Paul H.
TITLE OF INVENTION: SPECIES-SPECIFIC AND UNIVERSAL DNA
TITLE OF INVENTION: PROBES AND AMPLIFICATION PRIMERS TO RAPIDLY DETECT AND
TITLE OF INVENTION: IDENTIFY COMMON BACTERIAL PATHOGENS AND ASSOCIATED
TITLE OF INVENTION: ANTIBIOTIC RESISTANCE GENES FROM CLINICAL SPECIMENS
OURMER OF SEQUENCES: 273

APPLICANT: Baker, Brenda F.
APPLICANT: Cowsert, Lex M.
TITLE OF INVENTION: Antisense Modulation of CREL Expression
APPLICATION NUMBER: US/08/526,840B
FILING DATE: 11-SEP-1995
CLASSIFICATION 1435
PRIOR APPLICATION DATA:
APPLICATION DATA:
APPLICATION DATA:
APPLICATION NUMBER: US 08/304,732
ATTORNEY AGENT INFORMATION:
NAME: BAKER, Jean C.
REGISTRATION NUMBER: 35,433
REFERENCE/POCKET NUMBER: 850586.90012
TELEPAN: (414) 277-500
TELEPAN: (414) 277-5591
INFORMATION FOR EQUI DNO: 136:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLGEULE TYPE: DNA (genomic)
OCCANISM: Klebsiella pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 20, Application US/09156253C Patent No. 6001652 GENERAL INFORMATION:

| Patent No. 6207640
| GENERAL INFORMATION:
| APPLICANT: Attie, Kenneth
| APPLICANT: Carlsson, Lena
| APPLICANT: Geddard, Audrey
| TITLE OF INVENTION: Treatment of Partial Growth Hormone; TITLE OF INVENTION: Treatment of Sequences: 79
| NUMBER OF SEQUENCES: 79
COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/658,136
FILING DATE:
CLASSIFICATION: 435
ATTORNEY AGENT INFORMATION:
NAME: LASSEN, ELIZABETH
REGISTRATION NUMBER: GEN4-17.8
FEFERENCE/DOCKET NUMBER: GEN4-17.8
TELEPON: 508-872-5415
INFORMATION FOR SEQ ID NO: 10:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
Sequence 39, Application US/09504358

Patent No. 6365376
GENERAL INFORMATION:
APPLICAMT: ROUVIERE, Pierre E.
APPLICAMT: Brzostowicz, Patricia C.
TITLE OF INVENTION: GENES AND ENZYMES FOR THE PRODUCTION OF ADIPIC ACID INTERMEDIATES
FILE REPERENT APPLICATION NUMBER: US/09/504,358
CURRENT PILING DATE: 1090-02-15
EARLIER APPLICATION NUMBER: 60/120,702
EARLIER PILING DATE: 1999-February-19
NUMBER OF SEQ ID NOS: 49
SOFFWARE: Microsoft Office 97
SEQ ID NO 39
LENGTH: 18

Patent No. 6537751

GENERAL INCOMATION

APPLICANT: Cohen, Daniel

APPLICANT: Cohen, Daniel

APPLICANT: Chunakov, Ilya

APPLICANT: Chunakov, Ilya

TITLE OF INVENTION: Bialielic markers for use in constructing a high density...

TITLE OF INVENTION: Bialielic markers

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT FILING DATE: 1999-10-20

EARLIER APPLICATION NUMBER: US 09/298,850

EARLIER APPLICATION NUMBER: US 60/109,732

EARLIER FILING DATE: 1998-11-23

EARLIER FILING DATE: 1998-04-21

NUMBER OF SEQ ID NOS: 11796
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FEATURE:

Sequence 19, Application US/08750064
Patent No. 6040142
GENERAL INFORMATION:
APPLICANT: MELKI, JUDITH
APPLICANT: MINICH, ARNOLD
TITLE OF INVENTION: METHOD AND PROBES FOR DETECTING MARKERS
TITLE OF INVENTION: BOUND TO THE LOCUS OF CHILD SPINAL MUSCULAR ATROPHIES
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
